

SOLAR ENERGY

1. Use arrows to match the following terms to their definition:

Radiation

Electromagnetic radiation emitted by the part of the spectrum that occupies the intermediate position between visible light and X-rays

Ultraviolet

They produce electricity from sunlight

Ozone layer

The emission of energy or particles produced by some bodies and propagating through space

Photovoltaic panel

Taking advantage of energy from the Sun to produce heat

Thermal panel

Area on the Earth's stratosphere containing a high ozone concentration

2. Find out and identify the largest solar energy producing country in the world on this map:
