

Biomass energy

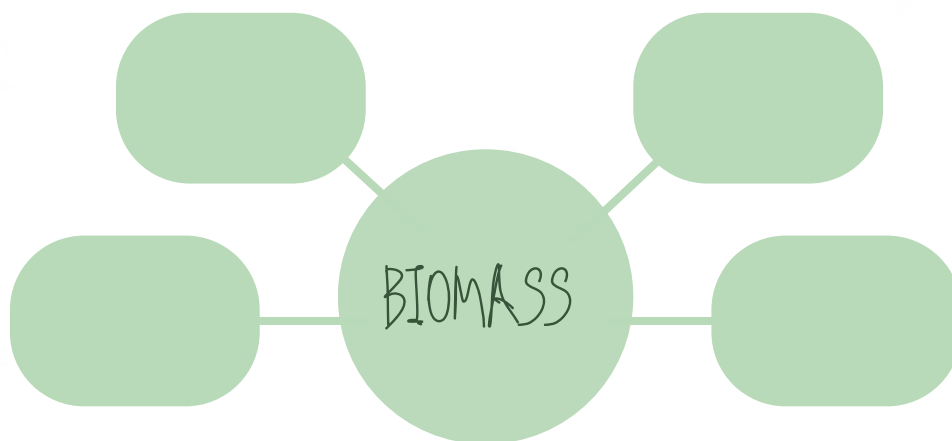

1. Fill in the gaps with the right words:

Natural / Residual

_____ Biomass: the majority is wood from the trees. This is the traditional way it has always been used by humans to warm up and cook.

_____ Biomass: produced in agriculture, forestry, and livestock farms, but it's also generated in industry and urban areas. As well as producing electricity, it's used to eliminate this type of waste (for example, clearing forests reduces the risk of fires).

2. Help Compostite to complete the diagram:

Animal waste

Flammable waste

Toxic waste

Agricultural waste

Plant and forest waste

Explosive waste

Chemical waste

Urban waste
